APPROVED:

Dr. David Prytherch, Advisor

Dr. Kim Medley, Reader

Dr. Kelly Quinn, Reader

ACCEPTED:

Dr. Carolyn Haynes, Director, University Honors Program
Acknowledgements

This thesis was my first true research work. It is an insufficient testament to the effort, patience and wisdom of all those who guided me along the way. This work began in the June, 2010 as part of the SUMR-UC program at the University of Cincinnati, directed by Dr. Michael Baldwin. I was mentored during this program by the talented Peggy Shannon-Baker, who provided invaluable insight even after the program was complete.

The project continued as part of Dr. Kim Medley's Geography Capstone class at Miami University, and then as an honors thesis advised by Dr. David Prytherch and read by Dr. Medley and Dr. Kelly Quinn.

I owe special debts of gratitude to Dr. Baldwin, Ms. Shannon-Baker, Dr. Medley, Dr. Prytherch, Dr. Quinn, my Geography Capstone classmates, the Miami University Department of Geography, as well as to Michael Maloney, the Urban Appalachian Council, Nancy Laird, Bonnie Hill, and the Cincinnati parents who participated in this study. You are all my teachers.

Abstract
Open enrollment and school choice have been used throughout the United States for decades as a tool for desegregation, and in the Cincinnati, Ohio Public Schools (CPS) since 1973. Scholars have debated the effectiveness and fairness of school choice, but more geographical analysis is needed on the spatial opportunities and constraints that parents face. This paper explores the how geography factors in school choice. What are Cincinnati parents’ geographic understandings and preferences including location, transportation, associations and assigned meanings? Using a survey of 25 CPS parents interviews with 11 CPS parents, I explored how these preferences affect parental school choice. CPS parents are particularly concerned with issues of safety, identity, and transportation. The paper concludes by discussing how a better understanding geographical factors in parental school choice may provide a basis for more effective policies to promote racial and socioeconomic equity.
